POWDER TECHNOLOGY

Subject Index of Volume 96

Agglomeration
agglomeration behaviour of powders in a Lödige mixer granulator, 116
Analytical solution
particle normal stress distribution around a rising bubble in a fluidized bed, 148

Ball mills
energetics of collision between grinding media in ball mills and mechanochemical effects, 190
Belt conveyors
exhaust volume model for dust emission control of belt conveyor transfer points, 139

Carbonyls
the production of fine particles of metal complexes using supercritical fluids, 158
Choking
gas–particle flow in vertical pipes with high mass loading of particles, 6
Circulating beds
gas–particle flow in vertical pipes with high mass loading of particles, 6
estimates of turbulence mechanisms in circulating fluidized bed combustors, 90
radial profiles of solids concentration and velocity in a very fine particle (36 μm) riser, 262
Circulating fluidized bed
a new technique for the evaluation of a circulating fluidized bed mixing chamber with a central solids jet, 202
Cobalt ferrite
synthesis of uniform cobalt ferrite particles from a highly condensed suspension of β-FeOOH and β-$Co(OH)_2$ particles, 85
Cohesive materials
an elastic shell model for wet particulate solids, 106
Collisions
energetics of collision between grinding media in ball mills and mechanochemical effects, 190
Combustors
estimates of turbulence mechanisms in circulating fluidized bed combustors, 90
Contactors
novel rotary gas/solid contactor, 1
Contact stresses
energetics of collision between grinding media in ball mills and mechanochemical effects, 190
Content uniformity
compression of enteric-coated pellets to disintegrating tablets: uniformity of dosage units, 248
Continuous sedimentation
pilot-plant studies of non-steady-state continuous sedimentation: hydrodynamics and solids distribution profiles, 267

Cosserat effect
numerical simulation of filling in silos with a polar hypoplastic constitutive model, 227

Dewatering
influence of surfactants on filter cake parameters during vacuum filtration of flocculated iron ore sludge, 240
Discrete element method
numerical simulation of two-dimensional fluidized beds using the discrete element method (comparison between the two- and three-dimensional models), 129
Downer
a new technique for the evaluation of a circulating fluidized bed mixing chamber with a central solids jet, 202
Downflow
flow study of a 0.05 m diameter downflow circulating fluidized bed, 255
Dust
exhaust volume model for dust emission control of belt conveyor transfer points, 139

Elastic moduli
elastic moduli of non-cohesive particulate materials, 24
Elastic shell model
an elastic shell model for wet particulate solids, 106
Electrical conductivity
pilot-plant studies of non-steady-state continuous sedimentation: hydrodynamics and solids distribution profiles, 267
Electrostatic discharge
the electrostatic charging trends and signal frequency analysis of a particulate material during pneumatic conveying, 181
Exhaust volume
exhaust volume model for dust emission control of belt conveyor transfer points, 139

Fast fluidized bed
a new technique for the evaluation of a circulating fluidized bed mixing chamber with a central solids jet, 202
FCC
flow study of a 0.05 m diameter downflow circulating fluidized bed, 255
Filter cakes
influence of surfactants on filter cake parameters during vacuum filtration of flocculated iron ore sludge, 240
Filtration
the influence of slurry concentration on the theoretical filtration efficiency of a transversal high gradient magnetic filter cell with bounded flow field, 42
Fines
the production of fine particles of metal complexes using supercritical fluids, 158
radial profiles of solids concentration and velocity in a very fine particle (36 μm) riser, 262

Elsevier Science S.A.

Flocculants
influence of surfactants on filter cake parameters during vacuum filtration of flocculated iron ore sludge, 240
Flooding
gas–particle flow in vertical pipes with high mass loading of particles, 6
Flow
flow study of a 0.05 m diameter downflow circulating fluidized bed, 255
Flow measurement
the electrostatic charging trends and signal frequency analysis of a particulate material during pneumatic conveying, 181
Fluidization
flow study of a 0.05 m diameter downflow circulating fluidized bed, 255
Fluidized beds
gas–particle flow in vertical pipes with high mass loading of particles, 6
analysis of temperature-history data at different angular positions of a horizontal tube immersed in a gas–solid fluidized bed, 79
estimates of turbulence mechanisms in circulating fluidized bed combustors, 90
numerical simulation of two-dimensional fluidized beds using the discrete element method (comparison between the two- and three-dimensional models), 129
particle normal stress distribution around a rising bubble in a fluidized bed, 148
radial profiles of solids concentration and velocity in a very fine particle (36 μm) riser, 262
Fractals
a probabilistic approach towards modeling the relationships between particle and pore size distributions: the multicomponent packed sphere case, 33

Gas–particle interaction
integrated particle collision and turbulent diffusion model for dilute gas–solid suspensions, 48
Gas–solid flow
gas–particle flow in vertical pipes with high mass loading of particles, 6
integrated particle collision and turbulent diffusion model for dilute gas–solid suspensions, 48
estimates of turbulence mechanisms in circulating fluidized bed combustors, 90
Gas–solids mixing
a new technique for the evaluation of a circulating fluidized bed mixing chamber with a central solids jet, 202
Gel–sol method
synthesis of uniform cobalt ferrite particles from a highly condensed suspension of β-FeOOH and β-$Co(OH)_2$ particles, 85
Granular beds
motion state transitions in a vibrated granular bed, 219
Granular flow
development of the model of segregation of particles undergoing granular flow down an inclined chute, 211
Granulation
agglomeration behaviour of powders in a Lödige mixer granulator, 116
Grinding media
energetics of collision between grinding media in ball mills and mechanochemical effects, 190

Heat transfer probe
analysis of temperature-history data at different angular positions of a horizontal tube immersed in a gas–solid fluidized bed, 79
Hypoplasticity
numerical simulation of filling in silos with a polar hypoplastic constitutive model, 227

Laminar flow
the influence of slurry concentration on the theoretical filtration efficiency of a transversal high gradient magnetic filter cell with bounded flow field, 42
Lödige mixer granulator
agglomeration behaviour of powders in a Lödige mixer granulator, 116

Magnetic filters
the influence of slurry concentration on the theoretical filtration efficiency of a transversal high gradient magnetic filter cell with bounded flow field, 42
Mass uniformity
compression of enteric-coated pellets to disintegrating tablets: uniformity of dosage units, 248
Mechanochemical effects
energetics of collision between grinding media in ball mills and mechanochemical effects, 190
Metal complexes
the production of fine particles of metal complexes using supercritical fluids, 158
Migration
development of the model of segregation of particles undergoing granular flow down an inclined chute, 211
Mixers
agglomeration behaviour of powders in a Lödige mixer granulator, 116
Mixor
a new technique for the evaluation of a circulating fluidized bed mixing chamber with a central solids jet, 202
Momentum probe
a new technique for the evaluation of a circulating fluidized bed mixing chamber with a central solids jet, 202
Monodisperse particles
synthesis of uniform cobalt ferrite particles from a highly condensed suspension of β-FeOOH and β-$Co(OH)_2$ particles, 85

Non-cohesive particles
elastic moduli of non-cohesive particulate materials, 24
Numerical simulation
numerical simulation of two-dimensional fluidized beds using the discrete element method (comparison between the two- and three-dimensional models), 129

Oedometry
elastic moduli of non-cohesive particulate materials, 24

Packed spheres
a probabilistic approach towards modeling the relationships between particle and pore size distributions: the multicomponent packed sphere case, 33
Paramagnetic particles
the influence of slurry concentration on the theoretical filtration efficiency of a transversal high gradient magnetic filter cell with bounded flow field, 42
Particle–particle collision
integrated particle collision and turbulent diffusion model for dilute gas–solid suspensions, 48
Particle pressure
particle normal stress distribution around a rising bubble in a fluidized bed, 148
Particle–turbulence interaction
integrated particle collision and turbulent diffusion model for dilute gas–solid suspensions, 48
Particle velocity
radial profiles of solids concentration and velocity in a very fine particle (36 μm) riser, 262

Pellets
compression of enteric-coated pellets to disintegrating tablets: uniformity of dosage units, 248
Pilot plants
pilot-plant studies of non-steady-state continuous sedimentation: hydrodynamics and solids distribution profiles, 267
Polar continuum
numerical simulation of filling in silos with a polar hypoplastic constitutive model, 227
Porous media
a probabilistic approach towards modeling the relationships between particle and pore size distributions: the multicomponent packed sphere case, 33
Probes
the electrostatic charging trends and signal frequency analysis of a particulate material during pneumatic conveying, 181

Quasi-diffusion
development of the model of segregation of particles undergoing granular flow down an inclined chute, 211

Random packing
a probabilistic approach towards modeling the relationships between particle and pore size distributions: the multicomponent packed sphere case, 33
Resonance
an elastic shell model for wet particulate solids, 106
Riser
a new technique for the evaluation of a circulating fluidized bed mixing chamber with a central solids jet, 202
Riser hydrodynamics
gas–particle flow in vertical pipes with high mass loading of particles, 6
Rotary reactors
novel rotary gas/solid contactor, 1

Segregation
development of the model of segregation of particles undergoing granular flow down an inclined chute, 211
Sensors
the electrostatic charging trends and signal frequency analysis of a particulate material during pneumatic conveying, 181
Shakers
motion state transitions in a vibrated granular bed, 219
Shear
numerical simulation of filling in silos with a polar hypoplastic constitutive model, 227
Shear flow
development of the model of segregation of particles undergoing granular flow down an inclined chute, 211
Silos
numerical simulation of filling in silos with a polar hypoplastic constitutive model, 227
Single bubble
particle normal stress distribution around a rising bubble in a fluidized bed, 148
Size distributions
a probabilistic approach towards modeling the relationships between particle and pore size distributions: the multicomponent packed sphere case, 33
Slurries
the influence of slurry concentration on the theoretical filtration efficiency of a transversal high gradient magnetic filter cell with bounded flow field, 42
Soils
elastic moduli of non-cohesive particulate materials, 24
Solids concentration profiles
pilot-plant studies of non-steady-state continuous sedimentation: hydrodynamics and solids distribution profiles, 267
Solids fraction
radial profiles of solids concentration and velocity in a very fine particle (36 μm) riser, 262
Supercritical fluid nucleation
the production of fine particles of metal complexes using supercritical fluids, 158
Surfactants
influence of surfactants on filter cake parameters during vacuum filtration of flocculated iron ore sludge, 240
Suspensions
the influence of slurry concentration on the theoretical filtration efficiency of a transversal high gradient magnetic filter cell with bounded flow field, 42
integrated particle collision and turbulent diffusion model for dilute gas–solid suspensions, 48

Tablets
compression of enteric-coated pellets to disintegrating tablets: uniformity of dosage units, 248
Temperature history
analysis of temperature-history data at different angular positions of a horizontal tube immersed in a gas–solid fluidized bed, 79
Transient regime
pilot-plant studies of non-steady-state continuous sedimentation: hydrodynamics and solids distribution profiles, 267
Triboelectric charging
the electrostatic charging trends and signal frequency analysis of a particulate material during pneumatic conveying, 181
Turbulence
gas–particle flow in vertical pipes with high mass loading of particles, 6
estimates of turbulence mechanisms in circulating fluidized bed combustors, 90
Turbulent diffusion
integrated particle collision and turbulent diffusion model for dilute gas–solid suspensions, 48

Uniform particle synthesis
synthesis of uniform cobalt ferrite particles from a highly condensed suspension of β-FeOOH and β-$Co(OH)_2$ particles, 85

Vacuum filtration
influence of surfactants on filter cake parameters during vacuum filtration of flocculated iron ore sludge, 240
Vibrated beds
motion state transitions in a vibrated granular bed, 219
Vibration
an elastic shell model for wet particulate solids, 106
